SMARTPIÙ

SMARTPIÙ

UV protected multi-wall polycarbonate sheet for translucent corrugated covering for use with metal sheets and roofing panels.

↪ Curious about the features:

SmartPIÙ is a 2.5 mm thick multi-wall polycarbonate sheet for roofing. The specialty of the product is the ability to extrude the sheets in various corrugated or profiled shapes to match a wide range of metal sheets or composite panels available on the market with a consequent saving in install costs. The thin sheet thickness allows for a high versatility of overlapping and the multi-wall structure offers remarkable advantages if compared to single skin sheets such as GRP or solid polycarbonate, for example the reduction of water condensation forming and a higher weather withstand capability.

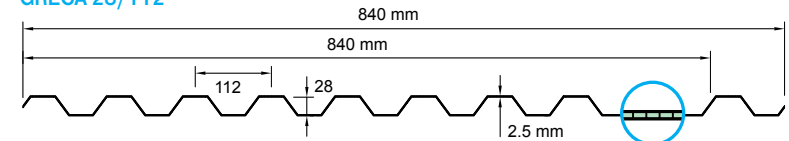

5-CORRUGATION

5-corrugation profiles are available for overlapping to most metal sheets and composite panels which exist on the market today.
